ALBRECHT - AUTOMATIK GMBH
SINCE 1958

ALBRECHT - AUTOMATIK GMBH
SINCE 1958

At the crucial moment, a safety valve must do one thing and one thing only: it must operate properly – and that means precisely at the specified conditions – so that neither the plant nor, above all, the people who work there, are ever at risk. So put your safety valve inspections and all safety-related maintenance work in the hands of professionals.

The Albrecht-Automatik team works to the highest standards for maximum reliability and absolute precision – so you can concentrate with confidence on your core business.

ALBRECHT-AUTOMATIK GMBH

SINCE 1958

WHEN IT COMES TO THE SAFETY
OF PERSONNEL AND EQUIPMENT,
EVERY DETAIL COUNTS:

- Operability of the valve verified by specialists?
- All safety-related wearing parts checked?
- And serviced and replaced with original spare parts?
- Service life of seals inspected?
- All safety devices and protective systems restored to operation after service?
